ABOUT ME

IT student based in Bangkok interested in embedded systems, AI, and software development. Experienced in building projects with computer vision, IoT devices, and cloud-based AI services, combining hardware and software to solve real-world problems.

EDUCATION

2024 - 2026	Bachelor's Degree in Electronic Computer Technology - Studied software development, design basic database and learning logic control. - Currently interest about Integrating AI with applications for high performance.
2022 - 2024	Diploma in Computer Technology - Studied Computer Systems, Computer Architecture, and Web Development, including fundamentals of hardware-software interaction and client-server systems. - Developed practical skills in PC hardware assembly/troubleshooting and Arduino-based embedded systems through hands-on projects.

INTERNSHIP EXPERIENCE

Feb 2023 - Apr 2023	IT Support
Southern border administrative centre (SBPAC)	- PC assembly, hardware installation, and component replacement - Operating system installation and software troubleshooting - Printer setup, configuration, and troubleshooting - LAN cable installation and basic network connectivity setup - Basic hardware diagnostics and system maintenance - User technical support and problem resolution

PROJECTS

- Smart Room Automation System**
Built a real-time AI-based room automation system using MobileNet-SSD and OpenCV for person detection, enabling electrical device control via GPIO on embedded hardware.
- Embedded AI Bottle Sorting System**
Built a real-time object detection pipeline using YOLOv26 with OpenCV, integrated with sensors and mechanical mechanisms to achieve fully automated sorting
- E-Commerce Flutter Application**
Developed a cross-platform e-commerce app using Flutter with product browsing, cart management, and basic backend integration.
- Realtime Voice Chatbot Restaurant Assistant**
Developed a real-time voice chatbot for restaurant ordering using Azure OpenAI, Speech-to-Text, and Text-to-Speech services. The system detects when the user finishes speaking, processes the order through an AI model, stores data in CosmosDB, and automatically sends the order to a chef-facing application for order listing.

SKILLS

- Web development:** HTML, CSS, JavaScript, React, Tailwind CSS
- Mobile app development :** flutter
- Computer Vision:** python libs Such as openCV, ultralytics, matplotlib
- IOTs:** Arduino, Raspberry Pi
- Language:** Speak English regularly and able to work with English speaker

AWARDS

- Qualified as one of the Top 20 teams among 42 teams in the Yala Hackathon 2023
- Qualified for the Poonpalang IoT Contest with a project integrating database systems on an Arduino platform
- 2nd in YOLO Artificial Intelligence Application Competition, 8th Rattaphum College Academic Week
